

Project plan

1. Introduction about the project

1. The project

Software solution to manage sales of home furniture for a company.

2. The client

Company in the area of home furnishing.

3. Team

I am Tihomir Kandev. My contact email is 483777@student.fontys.nl.

2. Problem description

The main problem, that my potential client faces, is not been able to properly present his/her products on the internet and don't have a good enough or even missing program that can handle the CRUD(create, read, update, delete) operations done by the staff to the products. Other things that the program will handle are: user been able to log in in the website, user been able to filter, manager role delegating the right to edit some content on behalf of a staff and staff been able to see aggregated data.

3. Project goal

My desired result is properly working website application. The final project should be an efficient system that is going to solve the problems (2. Problem description) of the potential client for both employees and users of the website.

4. Deliverables

- Website for the users where they can login and buy furniture, the staff will be able to handle simple operations with the products and retrieving certain data.
- URS (User Requirements Specifications)- document that describes what the users require from the system
- Test plan
- Test report
- User stories

- Design document

5.Non-deliverables

- Process report

6.Constrains

- The time I got is 5 months

7.Phasing
